Welcome to the Neuroanatomy Class!

My name is Dr. Radmila Filipovic and I have been teaching Human Neuroanatomy for the past 15 years. I started teaching Neuroanatomy during my postdoctoral program at the UConn Health Center. In our week together I am excited to share my knowledge of brain structures and their connections with you. Researching how and why we move should be an engaging and hands-on experience for all of us. During class, we will dissect sheep brains and cow eyes, observe human brain specimens, and analyze the nervous system through the creation of a drawing tutorial.

Important Items to Bring:

- Complete the [Laboratory Safety and Chemical Waste Management training](#)
- Closed toe shoes
- Hair tie for long hair
- Multicolor pencils or sharpees

All the best,

Dr. Filipovic
