Instructor and General Course Information
Instructors: Jeff Kinsella-Shaw, PhD, PT
Assistant Professor
Email: jeffrey.kinsella-shaw@uconn.edu

Maryclaire Capetta, PT, DPT
Assistant Professor-in-Residence
Email: maryclaire.capetta@uconn.edu

Location(s): Kinesiology Building, UConn’s Human Anatomy Lab

Course Description
Welcome to Human Anatomy and Physiology. This week we will discuss multiple systems of the human body, examining the inter-relatedness of structure and function. In addition to classroom discussion of these systems, in our hands-on laboratories, you will have the opportunity to learn and practice clinical examination of these systems. In the cadaver laboratory, you will see and perform dissections for an inside view of the structure and function of the human body.

Learning Objectives:
1. Explain the relationship of structure and function of the human body
2. Perform examinations of the major body systems including the cardiovascular, musculoskeletal, and neuromuscular systems.
3. Identify anatomical structures and relationships relevant to multiple body systems including cardiovascular, genitourinary, gastrointestinal, musculoskeletal, and neurologic systems.
4. Explain normal function of the cardiovascular system, neuromuscular system, gastrointestinal system and genitourinary system, musculoskeletal systems.

Requirements for the Course:
1. Complete the Laboratory Safety and Chemical Waste Management training
2. Complete the Biosafety Training
3. Students must bring:
   - Scrubs
   - Closed toe shoes
   - Hair tie for long hair
